SUMMARY

Senior Software Engineer with 2+ years designing reactive Java microservices and event-driven data pipelines. Own Salescode.ai's Promotions platform across **10+ client LOBs**, spanning system design, performance, and reliability.

EXPERIENCE

Salescode.ai

Gurugram, India

(Java, Spring Boot, Spring WebFlux, Kafka, Redis, PostgreSQL, Apache Flink)

Senior Software Engineer

April 2026 - Present

- Own end-to-end architecture and delivery of the **Promotions microservice** — driving design decisions, feature development, performance optimization, and production stability across **10+ client LOBs**.
- **Mentored 2 engineers** on the Promotions service, guiding them through system design, code reviews, and onboarding onto the codebase.
- Engineered **Apache Flink** jobs in Java to ingest client data from **VXceed APIs** and **Excel uploads** into the internal schema, with per-client field mapping, validation, and normalization.
- Decoupled **4 side-event streams** (budget, QPS, usability, frequency) from the core discount flow by publishing them to **Kafka** for downstream reporting.
- Contributed to the **Flutter** field sales rep app, implementing offline promotions display with local caching for use without network connectivity.

Software Engineer

July 2024 - March 2026

- Co-built backend features for the **Promotions microservice**, a reactive Spring Boot and WebFlux service with **50+ REST endpoints** that defines and calculates trade discounts on orders, keeping high-traffic endpoints **fully non-blocking** with Project Reactor.
- Built the service's persistence layer on **R2DBC** across **17 database entities**, keeping the full request path non-blocking from API to **PostgreSQL** instead of mixing reactive handlers with blocking JDBC calls.
- Redesigned the monolith's hardcoded discount logic as a plugin-based engine of **25+ calculators and evaluators**, using the **Factory design pattern** to dynamically resolve the right implementation for each promotion type.
- Implemented custom **payload transformers** across **6 entity types** to normalize the varying request formats sent by each client into a standard internal schema, keeping core discount logic uniform across clients.
- Cut API response time by **60%** with a **two-tier cache** (distributed **Redis** + local **EhCache**) and indexing on frequently queried columns in production.
- Developed a **React.js** self-serve promotions dashboard, letting clients create, publish, monitor, and activate or deactivate promotions through the UI without engineering involvement.

SKILLS

Programming Languages: Java, SQL, JavaScript

Frameworks and Libraries: Spring Boot, Spring WebFlux, Project Reactor, R2DBC, jOOQ, React.js

Databases and Caching: PostgreSQL, MySQL, Redis, EhCache

Messaging and Streaming: Apache Kafka, Apache Flink, Event-Driven Architecture

Architecture and Practices: Microservices, REST APIs, System Design, Design Patterns, OOP, Data Structures and Algorithms

AI: Claude Code, Cursor, AI-Assisted Development

Tools: IntelliJ IDEA, Git, GitHub, Docker, Postman, Linux

ACHIEVEMENTS

- Recognized as **Lead Performer** at Salescode.ai for two consecutive quarters, Q2 and Q3 FY 2025-26.

EDUCATION

Chitkara University

Bachelor of Engineering in Computer Science (CGPA: 9.22)

Rajpura, Punjab

2021 - 2025
